

The system can also be forgotten to arm.

AlarmTab® has a special analysis software so that you are still protected. This constantly evaluates the signals from the sensors and when the typical break-in signals are detected, an alarm will be set off, **even if the centre is out of focus.**

This function is provided by the combination sensors for the outer skin (sensors for windows and doors).

In addition, you can also set other outdoor sensors using Smart Home control so that lights, speech speakers, outdoor sirens, shutters, etc. start when the sensors are triggered in a set time window. That drives the perpetrators away before they get into the house. Thus AlarmTab® offers multiple protection, even if you have not thought about arming the system.
