

Approximately 30% of burglaries occur while residents are asleep. A very disturbing situation. Imagine you wake up at night because you've heard strange noises.

Clear information is now needed in order not to endanger oneself in search of the source of the noise.

Here AlarmTab® supports you with its unique ground plan view. You can display any floor and all rooms on an individual floor plan on the head office.

The control center supports you in drawing your own floor plans within a few minutes and displaying the sensors in the rooms.

If a sensor now triggers, you can immediately see in the floor plan which sensor has triggered. The room and the exact time are shown in the floor plan.

If the perpetrator continues to move, the course profile shows exactly where he is currently and which path he has taken through the house so far. So you don't put yourself in danger, everything is displayed clearly and unambiguously. The AlarmTab® system can be extended at any time with a second control centre, so you have e.g. a main control centre on the ground floor and an additional control centre in the bedroom and always everything in view.
