

Burglars often cause a **short circuit** to interrupt the power supply in the house. Then communication via W-LAN and Internet is usually no longer possible.

AlarmTab® has an automatic switchover to the GSM radio networks for telephone and SMS as well as UMTS and LTE so that you are reliably informed in such cases as well.

Within seconds, in the event of an alarm, the notifications are sent to you by call, SMS, and photos and sensors details by e-mail and push messages.

Any number of telephone numbers, SMS numbers and e-mail addresses can be stored. The integrated emergency power supply is able to continue monitoring and notification for up to **24 hours**.
