

AlarmTab® offers you the free choice between 2 alarm programs:

### **The classic alarm sequence**

You know this alarm process from every alarm system, if a sensor is triggered, sirens start and notifications and photos from the control centre are sent. With this program a fast and very simple protection can be achieved.

### **The multi-level alarm sequence**

This newly developed alarm sequence offers the 2-stage concept with pre-alarm alarm confirmation, perpetrator distraction and the step-by-step triggering of sirens and alarm loudspeakers and smart home switches. The program for reconnaissance support using **GPS** and **photos** and **audio recordings** is also started.

The multi-stage system is particularly safe against false alarms and actively supports you in protecting against burglars.

Test in peace which alarm sequence is the best choice for you.

You can choose between the programs with one click, no settings are lost.
