

Life means change

But why put a purchased system unused in the cupboard when it may no longer be needed due to changes in life?

We think it is better if the system can adapt to changes in life, take on new tasks, expand or adapt. **All this is possible with AlarmTab®.**

One click in the menu and the burglar alarm system becomes an ***alarm system for the mobile home***, or an ***emergency call system*** for the relatives, or a ***Smart Home control centre***, with which you can implement the entire control of the building.

AlarmTab® adapts to your needs, all components and all programs are compatible with each other, no matter which functions you use. wish for the future, no matter how life changes, AlarmTab® adapts.

All programs for other applications are already pre-installed on your head office, with just one click you can use your system for other purposes.

Best of all, you can continue to use all existing sensors as you like. With AlarmTab® everything can be used without restrictions.

And thanks to the **lifelong free update service**, you receive new technical developments as updates directly to your head office.
