

If you already have a **language assistant** or **other smart home devices** in use, make it work for me.

AlarmTab® offers the possibility to integrate devices from **any manufacturer** for quick and easy access on the central display and the possibility to connect **speech assistants** with the existing sensors of AlarmTab®.

You can turn a simple speech assistant into an **intelligent smart home controller** that can also be controlled by sensors. Start heating, air conditioning, lights, sirens, and all other devices automatically when the sensors such as temperature, light, smoke, movement, etc. send a signal.

Turn your existing devices into intelligent smart home controls with no additional financial outlay, **by freely setting what should happen when and how**. AlarmTab® opens up completely new worlds in the field of intelligent building control.
